Overview

Purpose   What bazaary is:

- Is just another online bazaar such eBay giving visibility to tangible items from stuff companies (providers) whom operate online. Alike being a big retailer acting the way Trovit does, listing outsource results.
- Any guest user, may buy through Bazaary, no registration is needed
- Bazaary has its own catalogue filled with outsource supplier items
- Bazaary is a just an "*any kinda stuff marketplace*"
- Bazaary does not sell directly, just taxes Bazaary incoming sales to suppliers
- At first release bazaar just have the idea of having an online catalogue. In the coming future, some smartphone apps will be released

Contents   *Bazaary topics.*

Advice   *A product Description is derived from the Product breakdown structure, The end-users of the product, Quality Management Strategy and the Configuration Management Strategy.*

A Product Description can take a number of formats, including: Document, presentation slides or mind map; Entry in a project management tool.

The following quality criteria should be observed:

- The purpose of the product is clear and is consistent with other products
- The product is described to a level of detail sufficient to plan and manage its development
- The Product Description is concise yet sufficient to enable the product to be produced, reviewed and approved
- Responsibility for the development of the product is clearly identified
- Responsibility for the development of the product is consistent with the roles and responsibilities described in the project management team organization and the Quality Management Strategy
- The quality criteria are consistent with the project quality standards, standard checklists and acceptance criteria
- The quality criteria can be used to determine when the product is fit for purpose
- The types of quality inspection required are able to verify whether the product meets its stated quality criteria
- The Senior User(s) confirms that their requirements of the product, as defined in the Product Description, are accurately defined
- The Senior Supplier(s) confirms that the requirements of the product, as defined in the Product Description, can be achieved.

Purpose

(This defines the purpose that the product will fulfil and who will use it. Is it a means to an end or an end in itself? It is helpful in understanding the product's functions, size, quality, complexity, robustness etc.)

Bazaary is just another online bazaar such eBay.

Bazaary wants to give visibility to tangible items from stuff companies (providers) whom sell online. Alike being a big retailer acting the way Trovit does, listing outsource results.

When user visits Bazaary website may list some categorized items, and open their *brochure* (like a landing page), user will be able to read the item full features, and know the actual supplier (item provider).

Moreover the user will have the opportunity to Buy it! Directly to the supplier, without leaving Bazaary webpage.

This means bazaary won't have registered users, but will have sells. Then, item sells should be collected, in any way, and be shown in the catalogue, to promote "best sellers", and to promote Bazaary itself.

It would be desirable in the coming future to drop some item review data (scores, highest voted comment) from suppliers item webpage, but because the nature of bazaary suppliers web e-commerces, this should be under hard study before get ready to be started.

Composition

Bazaary **must** have so simple interfaces, exactly 2 main (catalogue and brochure) and just one overlay frame (supplier payment round-trip).

Just a catalogue with the main item features, and a search bar.

Every item **must** have a landing with full features and HighRes picture(s) carousel.

Buying an item may imply opening an overlay with the real supplier payment page (provider acquisition page)

Derivation

(What are the source products from which this product is derived? Examples are: a design is derived from a specification; a product is bought in from a supplier; a statement of the expected benefits is obtained from the user; or a product is obtained from another department or team)

Bazaary items database **have to** be provided by Bazaary with regular upload of excel spreadsheet files.

Product pictures **may** be acquired from excel "picture" column.

The rest of product information appears on the spreadsheet, even the providers item acquisition page, supplied as an URL in the excel rows.

Because no user registry is needed, there's no need to control logins neither any payment data, except the sale token.

Any time a Bazaary item is bought, a token **must** be injected to providers url, in the following way

https://payments.ebay.com/ws/eBayISAPI.dll?CheckoutProcessor&item=131673102628&quantity=1&bzyToken=<Bazaary Token Value>

.

---

[1] Unique key, probably allocated by the configuration management method and likely to include the project name, item name and version number
[2] Name by which the product is known

Format and Presentation

(The characteristics of the product - for example, if the product were a report, this would specify whether the report should be a document, presentation slides or an email)

Catalogue search bar **must** find the way "Google" does (with autocompletion and complex search options), and **may** contain filters for item features such categories, tags, price, or colours.

It is strongly **recommended** to have a nice User Interface, that's why catalogue may have the Pinterest look and feel.

We **would** like to have friendly urls for item landing pages, helping SEO positioning.

Catalogue scroll **must** be fast, then LowRes and Reduced Bitmap pictures may be produced to feed the catalogue.

Landing page display **could** be faster too, and may show a HighRes picture carousel aside item data brochure.

Because acquisition is not in deed provided by Bazaary, is not desirable a high performance on this, but we want to repeatedly check the status of supplier platform availability while the landing is displayed, and "Buy now" button, **must** be immediately replaced with the "Not currently available" button when supplier is down, and the opposite, of course.

It **would** be nice having an intelligent not found page, suggesting item possibilities near the friendly url search (by item name, supplier, description, category or tag).

Furthermore, it **would** be nice to have a smart search, what asks first if there's any match, to save items load if not necessary.

Finally this last brings back the **wondering** about having a connected client, who's notified when new items arrive.

Development Skills Required

(An indication of the skills required to develop the product or a pointer to which area(s) should supply the development resources. Identification of the actual people may be left until planning the stage in which the product is to be created)

Bazaary International Supplies, Inc. Is considering to hire right now agile development services, as wants to become a *prosumer* in UI design, defining use cases and error pages, and wants to host itself the implemented solution, once approved, but rather need some guidance coming from the hired organization.

DevOps, Analysts, UI designers and Supervisors are all welcome.

Quality Criteria[3]	Quality Tolerance[4]	Quality Method[5]	Quality Skills Required[6]

Quality Responsibilities

Role	Responsible Individuals
Product Producer	<Your organization here>
Product Reviewer(s)	**Bazaary product area**
Product Approver(s)	**Bazaary stakeholders**

---

[3] To what quality specification must the product be produced, and what quality measurements will be applied by those inspecting the finished product? This might be a simple reference to one or more common standards that are documented elsewhere, or it might be a full explanation of some yardstick to be applied. If the product is to be developed and approved in different states (e.g. dismantled machinery, moved machinery and reassembled machinery), then the quality criteria should be grouped into those that apply for each state

[4] Details of any range in the quality criteria within which the product would be acceptable

[5] The kinds of quality method - for example, design verification, pilot, test, inspection or review - that are to be used to check the quality or functionality of the product

[6] An indication of the skills required to undertake the quality method or a pointer to which area(s) should supply the checking resources. Identification of the actual people may be left until planning the stage in which the quality inspection is to be done
